

CMP6200 Assessment Brief

Module Title: Individual Honours Project			
Module Code: CMP6200			
Assessment Type	Level	Weighting	Word Count
CWK: Final Report	6	40%	5000
Submission Date	Submission Time	Module Leader	
05/05/2026	3:00 PM	Gerald Feldman	Final Project Report

Assessment Brief

Assessment Information	
Assessment Task (with genre/type)	Final Report This is the culminating written output, a comprehensive document detailing the entire project journey. It includes a refined problem statement and literature review (i.e., covered in the interim project proposal). However, the focus should be on providing a thorough account of the artefact's design and development, a detailed description of the implementation process, and a robust critical evaluation of its relevance and impact within a suitable societal, industrial, or scholarly context.
Assessment Title	Individual Hons Project (FYP): <i><use your Project Title, as the assessment title></i>
Things to include:	Final Report - Artefact Design: <i>this should be objective and factual (use tables, graphs, and figures where appropriate).</i> - Implementation: <i>This is where you explain how your artefact addresses your project questions. Discuss the construction of the artefact. which can include structuring and validating the artefact through logical consistency with appropriate evidence.</i> - Critical Evaluation: <i>Summarise your artefact and explain its significance. How does it compare with other similar work from the knowledge base you reviewed? What is the impact of your artefact? What are the limitations of your work? Restate the contribution your project has made. Include practical implications or suggest future research directions.</i>

BCU Assessment Brief (T1)

Completion of this assessment will address the following learning outcomes:	
	Apply discipline-specific methodologies and techniques to design the artefact that addresses the identified problem.
	Implement the designed artefact to address the intended purpose.
	Critically evaluate the artefact's relevance and impact within a suitable societal, industry or scholarly context.

Referencing Style

- BCU Harvard

More information on referencing is available here: <https://www.bcu.ac.uk/library/services-and-support/referencing>

Use of Artificial Intelligence

PROHIBITED

You MUST NOT use any generative Artificial Intelligence in this assessment unless specifically authorised for reasonable adjustments. You MAY use non-generative tools such as a spell-check, basic grammar check (non-generative), calculator or similar. If you have any doubts about using an AI tool, please consult the [Student AI Guidelines](#) or ask your tutor.

Whilst AI tools can be helpful in assisting learning, when it comes to assessment, the [Academic Misconduct Procedure](#) is clear that this should be a student's own original work and not the work of other people or AI tools.

The [Use of AI Tools – Student Guidelines](#) follows the same guidelines your lecturers use. If you are unsure of whether AI is appropriate within your work, please read the guidelines or ask your lecturer. For advice and guidance around academic writing, please visit the [Centre for Academic Success](#).

Academic Integrity Guidance

Academic Integrity means completing and submitting your own original work while properly acknowledging sources. Following academic conventions, such as referencing and citation, helps avoid plagiarism. The [Centre for Academic Success](#) offers resources on Moodle, workshops and 1-2-1 support to improve skills like paraphrasing and referencing.

Academic Misconduct

Academic misconduct is conduct that has or may have the effect of providing you with an unfair advantage by relying on dishonest means to gain an advantage and which therefore compromises your academic integrity.

The [Academic Misconduct Procedure](#) sets out the process we will follow and the penalties we may apply in cases where we believe you may have compromised your academic integrity by committing academic misconduct.

Word Count

The maximum word count for this module assessment is shown on Page 1. A +10% margin of tolerance is applied, beyond which nothing further will be marked. Marks cannot be awarded for any learning outcomes addressed outside the word count.

BCU Assessment Brief (T1)

The word count refers to everything in the main body of the text (including headings, tables, citations, quotes, lists, etc.). Everything before (i.e., abstract, acknowledgements, contents, executive summaries, etc.) and after (i.e., references, bibliographies, appendices, etc.) is **not** included in the word count limit.

Submission Information

Present any written aspects of the assessment using font size 11 and using 1.5 spacing to allow for comments and annotations to be added by the markers.

Complete the appropriate cover sheet for this assessment and append your work.

This assessment will be marked by your supervisor, and most of the work will be marked by an independent second marker.

Submit this coursework assessment task via Moodle.

Late Submission

Where you are required to submit an assessment by a certain deadline (for example, essays, case studies or physical artefacts) but you fail to meet the deadline, your mark will be reduced in accordance with the [Late Submissions Policy](#). This Policy does not apply where the assessment is 'in-person', such as exams and in-class tests.

For support on submission, please review the [Submitting Your Assignment](#) e-learning resource.

Final Report: Table of Assessment Criteria and Associated Grading Criteria

Component	90-100%	80-89%	70-79%	60-69%	50-59%	40-49%	20-39%	0-19%
Artefact Design 30%	Artefact is a highly robust, innovative, and meticulously detailed explanation of the design that showcases the technical use of discipline-specific methods or methodologies.	Artefact is innovative, and a detailed explanation of the design is provided. There is clear evidence of employing discipline-specific methods or methodologies effectively.	Artefact is robust, with a detailed explanation of the design, meets objectives and employs suitable discipline-specific methods or methodologies.	The artefact is well-developed, and a design explanation is provided, indicating that it meets most of the objectives. Relevant discipline-specific methods or methodologies are used.	A relevant artefact is developed, offering key components that meet some of the objectives. However, there is a limited explanation of the design, and it employs generic methods or methodologies.	Artefact includes some of the key core components but does not provide an explanation of the design. The methods or methodologies used are unclear or incorrectly applied.	An artefact is presented, but it lacks essential components. The design appears unorganised, and the methods or methodologies used are misapplied.	An artefact is missing, or the one presented is inappropriate or irrelevant to the stated objectives. No suitable methods or methodologies were employed, or they are absent.
Implementation 30%	The Implementation of the artefact design and validation/testing is exceptionally clear and comprehensive, making it easy to understand the methodological approach and methods followed.	The implementation of the artefact design and validation/testing is complete, offering an understanding of the applied methodological approach and methods.	The implementation of the artefact design and validation or testing is complete, and offers an understanding of the applied methodological approach and methods	The implementation of the artefact design and validation/testing is complete, providing an understanding of the applied methods; however, it lacks a detailed explanation of the methodological approach.	The implementation of the artefact design and validation/testing is appropriate, but there are gaps in the methodological application of the approach.	The implementation of the artefact design is complete, but the validation or testing is incomplete, insufficient, or the methodological approach is flawed.	The implementation of the artefact's design and validation/testing is incomplete, and the methodological approach and methods used are inappropriate.	The implementation of the artefact's design and validation/testing is incomplete or absent. There are considerable flaws in the methodological approach and methods employed.
Critical Evaluation 40%	The evaluation offers a deeply insightful and objective perspective, thoughtfully exploring the artefact's significance, influence, and future possibilities.	The evaluation offers valuable insights and thoughtfully examines the artefact's relevance, impact, and future possibilities.	The evaluation offers an objective examination of the artefact, highlighting its relevance and impact.	The evaluation is solid, striking a balance between objectivity and a straightforward analysis of the artefact's significance and impact.	The evaluation is presented but lacks a detailed objective perspective and analysis of its significance in relation to the specified problem.	The evaluation is completed but flawed, as it is only partially contextualised to the problem. Although it addresses its relevance and impact, it remains incomplete and insufficient.	The evaluation is either incomplete or not adequately contextualised to the specified problem. There is minimal discussion of the relevance and implications.	The evaluation is either absent or too vague without sufficient detail. There is no discussion of its relevance and implications, or the discussion is irrelevant.
